

Investment Opportunity

Leliyn Graphite Project

Located on 100% owned Kingsland Minerals tenements, this project is situated less than 30km northeast of Pine Creek and 2 hours from Darwin along the Northern Territory's central infrastructural corridor.

Leliyn is one Australia's largest graphite deposits and occurs in a 20km-long graphitic schist unit with a true width in excess of 100m, with a current total Mineral Resource of 14.2 Mt of graphite.

The project has submitted a Mining Lease application and commenced a Scoping Study, supported by a recently announced Indicated Mineral Resource of 1 Mt of contained graphite.

Initial metallurgical testing indicates a commercial-grade concentrate of >94% total graphitic carbon. Further analysis shows a very fine flake product, with ongoing work to assess its conversion into purified, spherical graphite.

Kingsland Minerals plans to leverage strategic investment from Quinbrook Infrastructure Partners, which holds a 15.3% direct equity stake. Kingsland has agreements with Quinbrook for the offtake of flake graphite concentrate and the supply of renewable energy. Quinbrook is also exploring further processing of the concentrate into purified, spherical graphite at a proposed facility in Darwin.

Graphite is an essential mineral for battery anode material, with the graphite market forecast to move into deficit driven by EV battery demand and new export restrictions by key producers.

MINERALS

Investment Type

Greenfield

Status

Under feasibility

Region

Big Rivers, Northern Territory, Australia

Project Value

Various – Scoping Study underway

Presented to market by

Leliyn is Australia's largest graphite deposit located 200km south of Darwin.

Company profile

Kingsland Minerals Ltd is an exploration company with assets in the Northern Territory and Western Australia. Kingsland's focus is exploring and developing the Leliyn Graphite Project in the Northern Territory.

JORC Mineral Resources
194.6 Mt @ 7.3%
total graphitic carbon
(14.2 Mt contained Graphite)

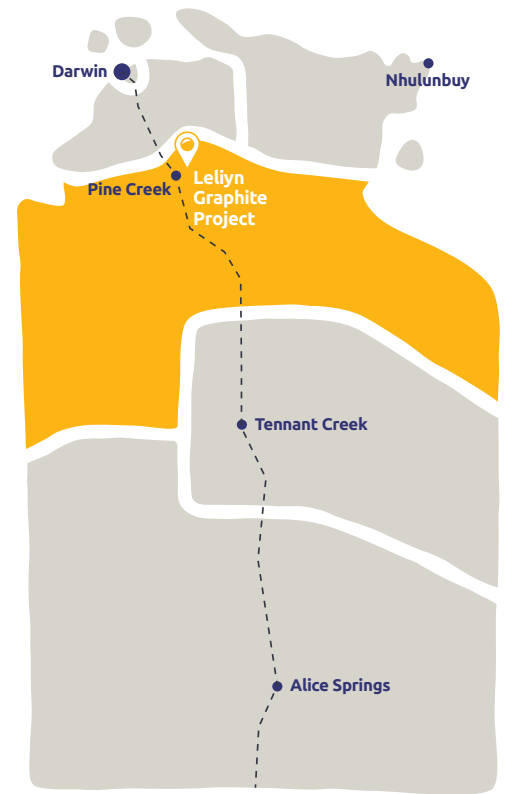

Target investment
Direct equity investment,
joint venture, and early
offtake opportunities

**Exploring downstream
processing**

Exploration upside
exploration target of 700
million – 1.1 billion at 7%
and 8% TCG for 50-90 million
tonnes of graphite

Leliyn Graphite Project is located 2-hours south of Darwin where there are port facilities to export to international markets.
